Art Unit: 1743

## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, drawn to a method for analyzing operation of a combustor, classified in class 436, subclass 155.
  - II. Claims 15-24, 28-29, 31-34 and 40-41 drawn to a system for analyzing operation of a combustor, classified in class 422, subclass 78.
  - III. Claims 25-27, drawn to a system for analyzing operation of a combustor, classified in class 700, subclass 274.
  - IV. Claims 35-39, drawn to an apparatus for supporting a sensor, classified in class248, subclass 94.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II, III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used for thermal analysis of chemical compounds.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, i.e. the system processor of invention III determines average amplitude of the signal during particular time period according to a particular procedure, while the system processor of invention II analyzes AC component of the signal emitted from the combuster according to an algorithm.

Inventions I-III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). Inventions I-III are

Art Unit: 1743

drawn to the method and apparatus comprising detecting and analyzing radiation. Invention IV is drawn to the support of the sensor, which in no way is related to the Inventions I-III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

2. A telephone call was made to Robert M. Abrahamsen on 10/15/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yelena G. Gakh, Ph.D. whose telephone number is (703) 306-5906. The examiner can normally be reached on 9:30 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on (703) 308-4037. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
